Word Recognition and Decoding

Capti ReadBasix percentiles table for the Word Recognition and Decoding subtest as a function of scale score and student's grade level. Decoding is the ability to apply knowledge of letter to sound correspondence to correctly pronounce written words. Word recognition is the act of seeing a word and immediately recognizing its pronunciation without conscious effort.

Because academic expectations increase with each grade level, maintaining the same percentile rank over time can indicate real growth on an absolute scale. Use the chart below to help interpret this relationship. It shows how *scale score bands* correspond to *percentiles* at each grade level. Each color represents a score band. The Y-axis displays grade-normed percentiles, and the X-axis shows grade levels. For example, a grade 5 student performing at the 25th percentile would fall within the **Weak** band on an absolute scale. If that student continues to perform at the 25th percentile in later grades, their placement would shift to the **Low Average** band by grade 6 and the **High Average** band by grade 10.

The table below provides detailed percentile information for each grade level. The columns represent grade levels, and the rows represent *scale scores*, ranging from **190 to 310** in one-point increments. Each cell shows the percentile rank associated with a given scale score at that grade level. Use this table to look up a student's percentile based on their scale score, or to see how the same scale score compares across different grades.

Score	Grade 3	Grade 4	Grade 5	Grade 6	Grade 7	Grade 8	Grade 9	Grade 10	Grade 11	Grade 12
190	1	1	1	1	1	1	1	1	1	1

Vocabulary

Capti ReadBasix percentiles table for the Vocabulary subtest as a function of scale score and student's grade level. Vocabulary is the body of words an individual knows. Understanding the meaning of words encountered in print is essential to strong reading comprehension.

Because academic expectations increase with each grade level, maintaining the same percentile rank over time can indicate real growth on an absolute scale. Use the chart below to help interpret this relationship. It shows how *scale score bands* correspond to *percentiles* at each grade level. Each color represents a score band. The Y-axis displays grade-normed percentiles, and the X-axis shows grade levels. For example, a grade 5 student performing at the 25th percentile would fall within the **Weak** band on an absolute scale. If that student continues to perform at the 25th percentile in later grades, their placement would shift to the **Low Average** band by grade 6 and the **High Average** band by grade 9.

The table below provides detailed percentile information for each grade level. The columns represent grade levels, and the rows represent *scale scores*, ranging from **190 to 310** in one-point increments. Each cell shows the percentile rank associated with a given scale score at that grade level. Use this table to look up a student's percentile based on their scale score, or to see how the same scale score compares across different grades.

Morphology

Capti ReadBasix percentiles table for the Morphology subtest as a function of scale score and student's grade level. Vocabulary is the body of words an individual knows. Understanding the meaning of words encountered in print is essential to strong reading comprehension.

Because academic expectations increase with each grade level, maintaining the same percentile rank over time can indicate real growth on an absolute scale. Use the chart below to help interpret this relationship. It shows how *scale score bands* correspond to *percentiles* at each grade level. Each color represents a score band. The Y-axis displays grade-normed percentiles, and the X-axis shows grade levels. For example, a grade 5 student performing at the 25th percentile would fall within the **Weak** band on an absolute scale. If that student continues to perform at the 25th percentile in later grades, their placement would shift to the **Low Average** band by grade 6, the **High Average** band by grade 9, and **Strong** by grade 12.

The table below provides detailed percentile information for each grade level. The columns represent grade levels, and the rows represent *scale scores*, ranging from **190 to 310** in one-point increments. Each cell shows the percentile rank associated with a given scale score at that grade level. Use this table to look up a student's percentile based on their scale score, or to see how the same scale score compares across different grades.

Sentence Processing

Capti ReadBasix percentiles table for the Sentence Processing subtest as a function of scale score and student's grade level. Sentence Processing is the ability to understand the relationships present within a sentence, including those of varying lengths and complexity.

Because academic expectations increase with each grade level, maintaining the same percentile rank over time can indicate real growth on an absolute scale. Use the chart below to help interpret this relationship. It shows how *scale score bands* correspond to *percentiles* at each grade level. Each color represents a score band. The Y-axis displays grade-normed percentiles, and the X-axis shows grade levels. For example, a grade 5 student performing at the 25th percentile would fall within the **Low Average** band on an absolute scale. If that student continues to perform at the 25th percentile in later grades, their placement would shift to the **High Average** band by grade 9.

The table below provides detailed percentile information for each grade level. The columns represent grade levels, and the rows represent *scale scores*, ranging from **190 to 310** in one-point increments. Each cell shows the percentile rank associated with a given scale score at that grade level. Use this table to look up a student's percentile based on their scale score, or to see how the same scale score compares across different grades.

Score	Grade 3	Grade 4	Grade 5	Grade 6	Grade 7	Grade 8	Grade 9	Grade 10	Grade 11	Grade 12
190 - 200	1	1	1	1	1	1	1	1	1	1

Reading Efficiency

Capti ReadBasix percentiles table for the Reading Efficiency subtest as a function of scale score and student's grade level. Sentence Processing is the ability to understand the relationships present within a sentence, including those of varying lengths and complexity.

Because academic expectations increase with each grade level, maintaining the same percentile rank over time can indicate real growth on an absolute scale. Use the chart below to help interpret this relationship. It shows how *scale score bands* correspond to *percentiles* at each grade level. Each color represents a score band. The Y-axis displays grade-normed percentiles, and the X-axis shows grade levels. For example, a grade 5 student performing at the 25th percentile would fall within the **Weak** band on an absolute scale. If that student continues to perform at the 25th percentile in later grades, their placement would shift to the **Low Average** band by grade 7 and the **High Average** band by grade 10-11.

The table below provides detailed percentile information for each grade level. The columns represent grade levels, and the rows represent *scale scores*, ranging from **190 to 310** in one-point increments. Each cell shows the percentile rank associated with a given scale score at that grade level. Use this table to look up a student's percentile based on their scale score, or to see how the same scale score compares across different grades.

Reading Comprehension

Capti ReadBasix percentiles table for the Reading Comprehension subtest as a function of scale score and student's grade level. Reading Comprehension is the ability to understand and interpret what was read.

Because academic expectations increase with each grade level, maintaining the same percentile rank over time can indicate real growth on an absolute scale. Use the chart below to help interpret this relationship. It shows how *scale score bands* correspond to *percentiles* at each grade level. Each color represents a score band. The Y-axis displays grade-normed percentiles, and the X-axis shows grade levels. For example, a grade 5 student performing at the 25th percentile would fall within the **Weak** band on an absolute scale. If that student continues to perform at the 25th percentile in later grades, their placement would shift to the **Low Average** band by grade 6 and the **High Average** band by grade 11.

The table below provides detailed percentile information for each grade level. The columns represent grade levels, and the rows represent *scale scores*, ranging from **190 to 310** in one-point increments. Each cell shows the percentile rank associated with a given scale score at that grade level. Use this table to look up a student's percentile based on their scale score, or to see how the same scale score compares across different grades.

Score	Grade 3	Grade 4	Grade 5	Grade 6	Grade 7	Grade 8	Grade 9	Grade 10	Grade 11	Grade 12
